

Amendments to the Claims:

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (Currently Amended) A method of bonding a fluoropolymer to a substrate comprising: providing a bonding composition including an amino-substituted organosilane between a partially fluorinated thermoplastic polymer fluoropolymer and a substrate to form a primed article; and

heating the primed article to a temperature for a sufficient time to bond the fluoropolymer and the substrate to form a bonded article.

2. (Currently Amended) The method of claim 1, wherein providing includes treating a surface of the fluoropolymer with the bonding composition and contacting the treated surface of the partially fluorinated thermoplastic polymer fluoropolymer with a surface of the substrate.

3. (Currently Amended) The method of claim 1, wherein providing includes treating a surface of the substrate with the bonding composition and contacting the treated surface of the substrate with a surface of the partially fluorinated thermoplastic polymer fluoropolymer.

4. (Withdrawn) The method of claim 1, wherein providing includes extruding a mixture of the fluoropolymer and the bonding composition and contacting a surface of the extruded mixture with a surface of the substrate.

5. (Original) The method of claim 1, wherein the substrate includes an inorganic substrate.

6 (Original) The method of claim 5, wherein the inorganic substrate includes a metal or a glass.

7. (Original) The method of claim 1, wherein the substrate includes an organic substrate.

8. (Original) The method of claim 7, wherein the organic substrate includes a non-fluorinated polymer.

9. (currently amended) The method of claim 1, wherein the partially fluorinated thermoplastic polymer fluoropolymer includes a polymer derived from a monomer selected from the group consisting of a vinylidene fluoride monomer, and ethylene combined with a comonomer, the comonomer being selected from the group consisting of tetrafluoroethylene, hexafluoropropylene, chlorotrifluoroethylene, 3-chloropentafluoropropene, a perfluorinated vinyl ether, vinyl fluoride and a fluorine-containing diolefin.

10. (Original) The method of claim 1, wherein the amino-substituted organosilane has a hydrolyzable substituent.

11. (Original) The method of claim 1, wherein the amino-substituted organosilane is selected from the group consisting of 3-aminopropyltrimethoxysilane, 3-aminopropyltriethoxysilane, (aminoethylaminomethyl)phenethyltrimethoxysilane, (aminoethylaminomethyl)phenethyltriethoxysilane, N-(2-aminoethyl)-3-aminopropylmethyldimethoxysilane, N-(2-aminoethyl)-3-aminopropyltris(2-ethoxyethoxy)silane, 6-(aminoethylaminopropyl)trimethoxysilane, 4-aminobutyltrimethoxysilane, 4-aminobutyltriethoxysilane, p-aminophenyltrimethoxysilane, 3-(1-aminopropoxy)-3,3-dimethyl-1-propenyltrimethoxysilane, 3-aminopropyltris(methoxyethoxyethoxy)silane, 3-aminopropylmethyldiethoxysilane, 3-aminopropyltrimethoxysilane, and aminoundecyltrimethoxysilane.

12. (Original) The method of claim 1, wherein the bonding composition includes a phase transfer catalyst or an acid catalyst.

13. (Original) The method of claim 12, wherein the phase transfer catalyst or acid catalyst is selected from the group consisting of a phosphonium salt, an ammonium salt, a fluorolipatic sulfonyl compound, a perfluoroalkylcarboxylic acid, and an arylcarboxylic acid.

14. (Original) The method of claim 1, wherein the primed article is heated to a temperature between 50 and 300°C.

15. (Original) The method of claim 1, wherein the primed article is heated to a temperature between 75 and 250°C.

16. (Original) The method of claim 1, further comprising applying pressure to the primed article.

17. (Currently Amended) A method of bonding a fluoropolymer to a substrate comprising:

treating a surface of partially fluorinated thermoplastic polymer ~~the fluoropolymer~~ the with a bonding composition including an amino-substituted organosilane having a hydrolyzable substituent;

contacting the treated surface of the partially fluorinated thermoplastic polymer ~~fluoropolymer~~ with a surface of a substrate; and

heating the contacted surfaces to a temperature for a sufficient time to bond the fluoropolymer and the substrate to form a bonded article.

18. (Original) The method of claim 17, wherein the substrate includes an inorganic substrate.

19. (Original) The method of claim 18, wherein the inorganic substrate includes a metal or a glass.

20. (Original) The method of claim 17, wherein the substrate includes an organic substrate.

21. (Original) The method of claim 20, wherein the organic substrate includes a non-fluorinated polymer.

22. (Currently Amended) The method of claim 17, wherein the partially fluorinated thermoplastic polymer fluoropolymer includes a polymer derived from a monomer selected from the group consisting of a vinylidene fluoride monomer, and ethylene combined with a comonomer, the comonomer being selected from the group consisting of tetrafluoroethylene, hexafluoropropylene, chlorotrifluoroethylene, 3-chloropentafluoropropene, a perfluorinated vinyl ether, vinyl fluoride and a fluorine-containing diolefin.

23. (Original) The method of claim 17, wherein the amino-substituted organosilane is selected from the group consisting of 3-aminopropyltrimethoxysilane, 3-aminopropyltriethoxysilane, (aminoethylaminomethyl)phenethyltrimethoxysilane, (aminoethylaminomethyl)phenethyltriethoxysilane, N-(2-aminoethyl)-3-aminopropylmethyldimethoxysilane, N-(2-aminoethyl)-3-aminopropyltris(2-ethylhexoxy)silane, 6-(aminohexylaminopropyl)trimethoxysilane, 4-aminobutyltrimethoxysilane, 4-aminobutyltriethoxysilane, p-aminophenyltrimethoxysilane, 3-(1-aminopropoxy)-3,3-dimethyl-1-propenyltrimethoxysilane, 3-aminopropyltris(methoxyethoxyethoxy)silane, 3-aminopropylmethyldiethoxysilane, 3-aminopropyltrimethoxysilane, and aminoundecyltrimethoxysilane.

24. (Original) The method of claim 17, wherein the bonding composition includes a phase transfer catalyst or an acid catalyst.

25. (Original) The method of claim 24, wherein the phase transfer catalyst or acid catalyst is selected from the group consisting of a phosphonium salt, an ammonium salt, a fluoroaliphatic sulfonyl compound, a perfluoroalkylcarboxylic acid, and an arylcarboxylic acid.

26. (Original) The method of claim 17, wherein the contacted surfaces is heated to a temperature between 50 and 300°C.

27. (Original) The method of claim 17, wherein the contacted surfaces is heated to a temperature between 75 and 250°C.

28. (Original) The method of claim 17, wherein contacting includes applying pressure.

29. (Withdrawn) The method of claim 4, wherein the amino-substituted organosilane has a hydrolyzable substituent.

30. (Withdrawn) The method of claim 29, wherein the substrate includes an inorganic substrate.

31. (Withdrawn) The method of claim 29, wherein the inorganic substrate includes a metal or a glass.

32. (Withdrawn) The method of claim 29, wherein the substrate includes an organic substrate.

33. (Withdrawn) The method of claim 32, wherein the organic substrate includes a non-fluorinated polymer.

34. (Withdrawn) The method of claim 29, wherein the fluoropolymer includes a polymer derived from a monomer selected from the group consisting of a vinylidene fluoride monomer, and ethylene combined with a comonomer, the comonomer being selected from the group consisting of tetrafluoroethylene, hexafluoropropylene, chlorotrifluoroethylene, 3-chloropentafluoropropene, a perfluorinated vinyl ether, vinyl fluoride and a fluorine-containing diolefin.

35. (Withdrawn) The method of claim 29, wherein the amino-substituted organosilane is selected from the group consisting of 3-aminopropyltrimethoxysilane, 3-aminopropyltriethoxysilane, (aminoethylaminomethyl)phenethyltrimethoxysilane, (aminoethylaminomethyl)phenethyltriethoxysilane, N-(2-aminoethyl)-3-aminopropylmethyldimethoxysilane, N-(2-aminoethyl)-3-aminopropyltris(2-ethylhexoxy)silane, 6-(aminohexylaminopropyl)trimethoxysilane, 4-aminobutyltrimethoxysilane, 4-

aminobutyltriethoxysilane, p-aminophenyltrimethoxysilane, 3-(1-aminopropoxy)-3,3-dimethyl-1-propenyltrimethoxysilane, 3-aminopropyltris(methoxyethoxyethoxy)silane, 3-aminopropylmethyldiethoxysilane, 3-aminopropyltrimethoxysilane, and aminoundecyltrimethoxysilane.

36. (Withdrawn) The method of claim 29, wherein the bonding composition includes a phase transfer catalyst or an acid catalyst.

37. (Withdrawn) The method of claim 36, wherein the phase transfer catalyst or acid catalyst is selected from the group consisting of a phosphonium salt, an ammonium salt, a fluoroaliphatic sulfonyl compound, a perfluoroalkylcarboxylic acid, and an arylcarboxylic acid.

38. (Withdrawn) The method of claim 29, wherein the contacted surfaces is heated to a temperature between 50 and 300°C.

39. (Withdrawn) The method of claim 29, wherein the contacted surfaces is heated to a temperature between 75 and 250°C.

40. (Withdrawn) The method of claim 29, wherein contacting includes applying pressure.
